

BULK TANK SAMPLING

WITH ENERTECH LABS

Step 1: Use sampling tool (“Bacon Bomb”) to pull a sample from the bottom of the tank.

- Dropped to bottom of the tank by a chain through a vent on top of the tank.

Step 2: Analyze sample to determine proper treatment. (See the fuel sample image below.)

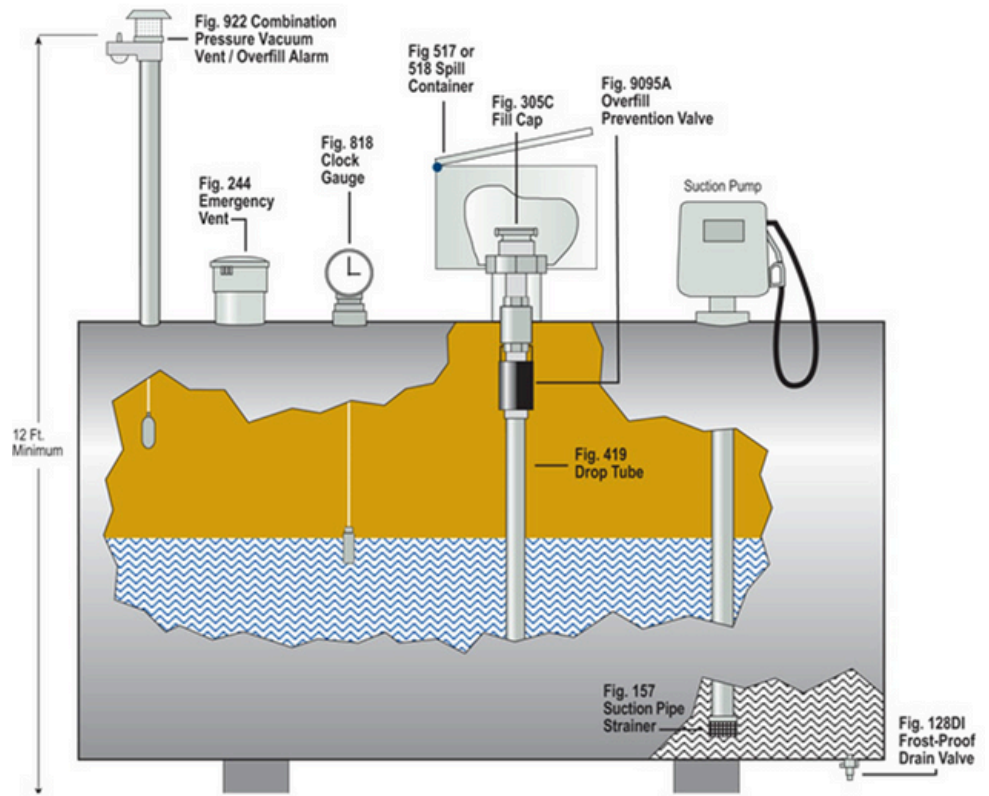

- Does standing water, algae, rust, gravel exist in the sample?

Step 3: Directly address the issues found in Step 2.

- Pump any standing water out of tank; treat with Enerfuel to dry fuel; begin regular treatment with Complete Fuel Treatment.

(The image above is of real fuel samples taken by Enertech Labs.)

(The image above depicts what the inside of a bulk tank looks like.)
